

Solar for Houses of Worship

How we work with you

1) Customized Proposal

After getting your electric bill and speaking with you to get a sense of your organization's priorities, our team will analyze dozens of solar design and financing solutions and come up with the best ownership option and best no-cost option for your building. Resonant provides unique financing opportunities that allow tax exempt organizations to benefit from solar tax credits. These customized proposals clearly describe what the solar would look like on your building and the financial costs and savings over the life of the project for each financing option.

2) Competitive Bidding

Once you've decided which option you want to move forward with, our team puts your project out to bid alongside all of the other projects we're working on. Our bundled competitive bidding achieves the best pricing for you from our network of experienced and vetted solar installers and financiers.

3) Client Support

We know that nonprofits may have complex decisionmaking processes and buildings with historic features. Our experienced outreach and project management teams provide transparent support and advocate for your best interests every step of the way to ensure timely delivery of a solar project that creates thousands of dollars in energy savings.

How to get Started
Talk with our team about your goals for a solar project. Call (617) 506 9248, email macy@resonant.energy, or sign up online to request a customized proposal at: www.resonant.energy/signup

Four Financing Solutions

1) Direct Ownership

Buy your system through our bulk purchasing program for simple contracting and excellent long term savings. Resonant Energy can connect you with a low-cost loan provider to cover the cost of your solar installation. If you have a large roof, you may also install and own an oversized array that shares extra power with your community at a discount.

2) Hybrid Ownership

Buy your system at a 12% discount by selling the tax benefits of your system. Own all of the power and state incentives generated from day 1 and own the panels in year 6. This is widely considered the best financial option for nonprofits that are otherwise unable to access the solar investment tax credit.

3) Power Purchase Agreement

Get panels installed on your roof at no cost, and lock in a low cost of electricity from your panels for 25 years. You will also have the option to purchase your system at a reduced cost after 10 years.

4) Community Solar/Roof Lease

Rent your roof, parking lot, or field as a shared solar site. Through community solar you can both meet your own electricity needs, and provide discounted electricity to members in your community. Receive a fixed annual lease payment for 20 years in addition to your electricity savings.

About Us

Our mission is to use solar projects to build wealth in under-invested communities. We are a B-Corp and 100% employee owned.

Our clients include community nonprofits, affordable housing providers, and low income homeowners in Massachusetts, New York City, and Long Island. Thanks to innovative financing options, a focus on operational excellence, and trusted local partners we are bringing the benefits of clean energy within reach for everyone.

We believe that the people most heavily impacted by climate change and racial injustice should receive the greatest benefit from the shift to an economy powered by clean energy. We have been working to realize this vision since 2016, and have completed solar installations across more than 100 sites to date.

After four years of hard work, we are proud to be the #1 solar provider for nonprofits in the Northeast. And we're just getting started.
