

# Why partner with Resonant Energy?

## Expertise

- Leading solar provider for nonprofits and multifamily housing in the Northeast
- In-depth project development experience
- Extensive knowledge of solar finance
- Plugged in with state and federal policies and incentives

## Customer Experience

- Clear communication and transparency are key to our model
- Serving houses of worship, nonprofits, affordable housing providers, and low income residential clients.
- We are committed to making solar accessible to all regardless of income or organizational structure

## Customization

- Strong relationships with vetted local installers
- Partnerships with nationwide and local solar financiers
- Connections with grassroots community organizations
- Flexible no-cost and low-cost options

## Triple-Bottom Line

- Registered B-Corp
- Triple-bottom-line prioritizing environmental, social and financial sustainability
- Everyone has the right to clean, affordable energy
- We're building wealth and resiliency through solar

## Employee Owned, Community-focused

- 100% employee-owned company
- Communities hold the knowledge and vision to improve their neighborhoods and we believe they should be in control of their own energy future

# What will Resonant Energy do for you?

## 1. Feasibility Analysis

The first phase of the analysis looks at your buildings' potential to host solar. We will investigate potential roadblocks including the material of your roof, nearby shading from trees or buildings, structural or electrical issues.

## 2. Financial Analysis

We analyze your electricity usage and apply a dozen financing scenarios, including ownership and no-cost options, to determine which type of funding will optimize your financial outcome, while maximizing the available policy incentives. We can also connect you with mission-aligned financiers.

## 3. Custom Proposal & Preliminary Design

You will receive a detailed proposal, inclusive of a comprehensive 25-year cash flow projection, that will outline the best solar financing and system size based on our in-depth analysis. We'll also generate a preliminary design customized for your organization. Our team will arrange a no-cost consultation to discuss the proposal and answer any questions you have about the solar process.

## 4. Permitting & Installation Logistics

We work directly with our financial, engineering, and installation partners throughout the entire scope of the project. We provide turnkey project management, including handling all permitting, incentive program applications and interconnection with the utility.

## 5. Technical Assistance & Excellent Customer Service

We are involved in your project from start to finish and our knowledgeable team members will be available to answer questions and troubleshoot any technical issues as they arise.
